

Performance™ Series Dehumidifier

The Benefits of Humidity Control

Your air conditioner or heat pump provides dehumidification as part of the cooling process. When temperatures and humidity rise during the summer months, typical comfort systems operate with greater frequency to keep up with the demand. A Carrier® whole-home dehumidifier, with its ability to pull moisture from indoor air, can help you feel more comfortable without dialing down the thermostat. Not only can it help save you money, it can provide additional benefits such as keeping airborne irritants like dust mites and some allergens under control and help prevent warping or structural damage to wood flooring or furnishings in your home.

Indoor Environment

A Carrier® whole-home dehumidifier can enhance your home's environment by keeping excess humidity under control. Managing airborne moisture inside can improve cooling system efficiency while enhancing summer comfort and indoor air quality as well.

Simplicity

The on-board LCD control provides a user-friendly interface for setting desired dehumidification levels. Or, it can be installed at a more conveniently accessed location. And because routine filter cleaning ensures top performance, there is a built-in "clean filter" reminder.

*Limited Warranty

To the original owner, the Carrier® Performance™ Series dehumidifier is covered by an industry leading five-year parts limited warranty. See warranty certificate at carrier.com for complete details and restrictions.
